

Our program is being used successfully all over the Western U.S. and parts of Canada, on crops such as alfalfa, wheat, oats, corn, potatoes, grapes, almonds and others—on both organic and conventional operations!

Create Pure Topsoil (perfectly balanced plant food)

We want to introduce you to an agricultural program that is unique in the organic industry. It consists of two liquid products—The Bio-N-Liven Answer® and The Carbon Answer®. They combine to feed, stimulate, replicate, and sustain the microorganism activity of your soil and thus speed the process of cleaning up the bad elements and leaving behind the castings and porous soil that constitute pure topsoil.

Stimulate Natural Life

The Bio-N-Liven Answer®

The Bio-N-Liven Answer® is designed to wake up, energize and stimulate the naturally occurring microorganisms in your soil, plants, and water. It contains a complete system of enzymes for microorganism stimulation and works enzymatically with plant growth hormones to help plants reach their full potential.

Loose, Nutrient Rich Top Soil

Our products are
OMRI Listed for use in
organic operations!

The Carbon Answer®

The Carbon Answer® is a high energy, all organic nutrient source that furnishes immediate energy to microbial life. The balance is a proprietary blend of water soluble trace minerals (Mineral Electrolyte) and 14 different carbon sources packed with energy, 1.25 million gram calories/pound. Thus it provides a quick energy source as well as a sustainable energy source for the organisms in your soil.

The Mineral Electrolyte mentioned above is water soluble trace minerals derived from humic substances—produced using only the non-chemical, slow water-leaching of top quality organic, humic material. It is pure fulvic acid, and can bring into water solution substantial amounts of potassium, iron, magnesium and silicone from micas. This in turn encourages the synthesis or manufacturing of new minerals.

How Our Program Works

Simply put, we combine the The Bio-N-Liven Answer® and The Carbon Answer® in a tank of water, let the mixture set for a short time to increase enzyme production and then apply to the desired acreage.

Setup

Tank and pump, spray rig, or drip system for flood ground.

Application

Continuous injection or drip, multiple single applications throughout the season, or one time spray if necessary. Our program provides foliar feed benefits, so recommended amounts applied evenly on the field as many times as possible is preferable.

Rates

General recommendation:

32 oz of The Bio-N-Liven Answer®

32 oz of The Carbon Answer®

Pricing:

Please contact your local dealer for pricing and more detailed information.

First year organic alfalfa pivot, planted in alkali desert soil last summer!

Recommendations

We understand that this is a fairly recent development and hope that you will find out for yourself how effective these products are. We recommend that you set aside a trial plot for testing and then expand the use of our program as you see favorable results. For the sake of comparison (knowing what our program can do for you), we recommend tracking the following areas that we have seen benefits to our customers in:

Better Water Penetration

- Improved crop production
- Improved water penetration and retention
- Improved seed germination even in an old stand
- Improved root establishment
- Balance of plant nutrients (foliar tests)
- Costs less than most fertilizer programs
- Creates loose, nutrient rich soil

Our agricultural products have been used, refined, and improved for over 15 years. Dr. Jackson, developer of these products, received his Ph.D. from the University of Denver, completed post doctoral study at the Stanford University Advanced Management College, and was involved in hazardous and toxic substance reduction research at Southwest Research Institute in San Antonio, TX. He loves his work and has devoted his life to it. We thank him for the information provided in the preparation of this flyer.

Results vary. We stress that no universities were involved in obtaining product and program results. Results mentioned are from real growers on real fields, but don't take our word for it—try it yourself and discover how you can benefit from pure organic topsoil.
